

We offer:

tilt&turn

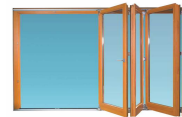

casement

pivot

folding doors

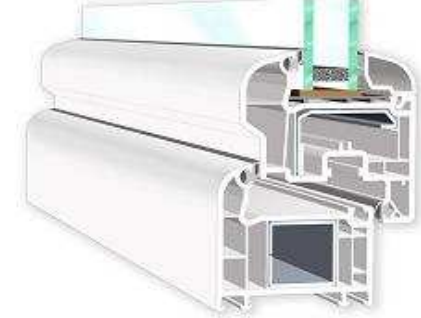

lift & slide doors

PVC entry doors

- Classical contours with slightly rounded edges and grey seals
- 5-chamber profile with a basic overall depth of 70 mm
- High insulating properties to minimize heating costs and external noise
- Optimum static properties for durability and stable value
- Specially shaped steel fittings for increased stability and installation of burglar-proof fittings

Modern architecture constantly demands new concepts in window design, creating unlimited design possibilities with PVC windows, whether these be rectangular, arch headed or bow windows, symmetrical bay windows or asymmetric triangular windows.

VEKA profile systems can be found everywhere – in different countries and in different forms because architecture is an expression of a country's culture. With their versatile profile design and constructions, VEKA window and door systems can be perfectly adapted to the typical features of the respective market.

Colourful windows and doors emphasise the main design features. With their vast range of plain colours and wood finishes VEKA offers individual solutions to suit all tastes. The colours of windows adapt themselves harmoniously to each type of house and façade design. The colour foils are applied either on one side or on both sides. This allows you to combine our colours in a variety of ways; you can even choose different colours for inside and out.

Alphaline 90

$U = 1.0 \text{ W/(m}^2\text{K)}$

- 90-mm system with 6-chamber geometry
- Pane thickness: the deep glazing rebate allows a glazing thickness of between 24 and 50 mm for sash and outer frame
- Best thermal insulation of up to $U_w = 0.8 \text{ W/m}^2\text{K}$, depending on the type of glazing, significantly reduces heating costs
- Wall thickness in highest quality group: RAL Class A (DIN EN 12608, Class A)
- High-quality gaskets in grey or black – the three-layer centre seal system reliably keeps cold, draughts and damp at bay
- Galvanised metal reinforcement in accordance with VEKA reinforcement guidelines guarantee stability and long-lasting functionality
- Elegant, slightly rounded edges
- Visible surface: 118 mm
- Hardware in accordance with DIN 18357: Compatible with system-tested, quality assured hardware
- Accessories: Mounting profiles, extensions, window sill connections, wall connections, couplings, additional reinforcements

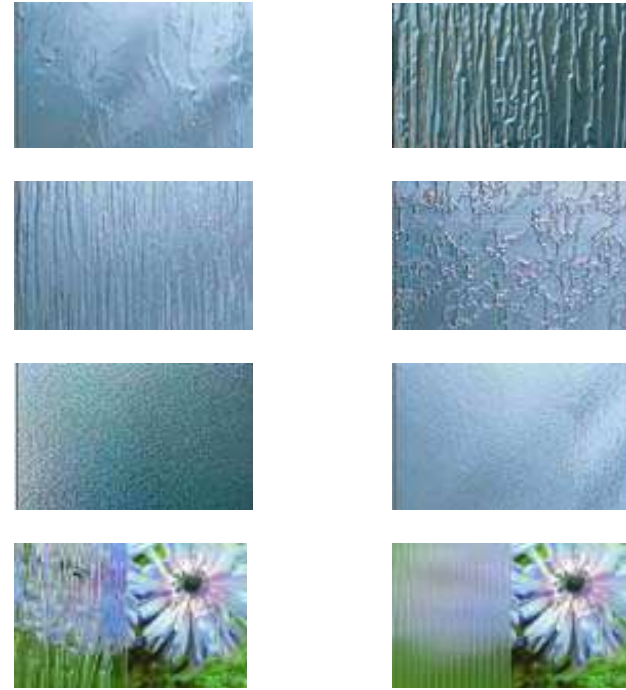

Custom

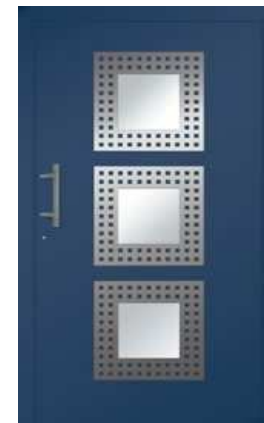

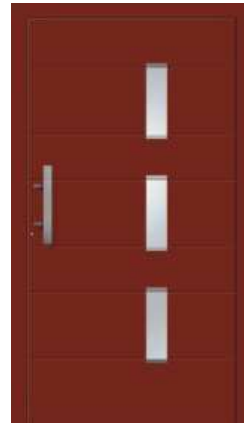

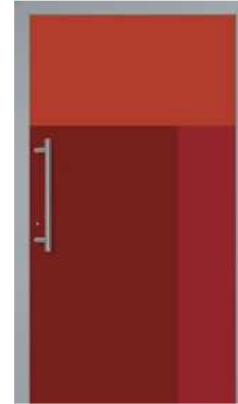

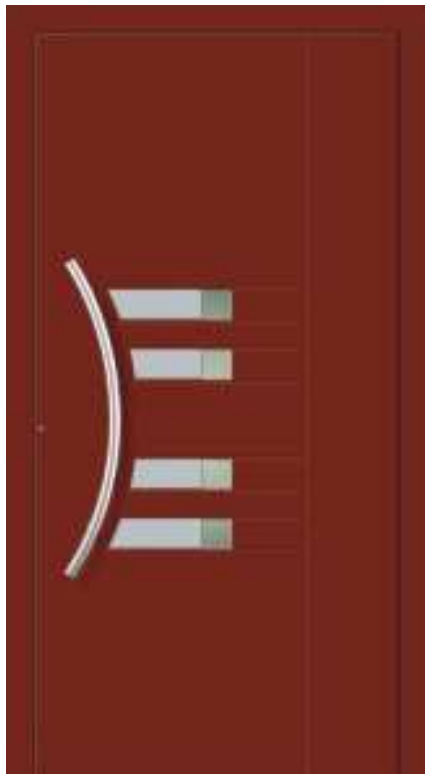

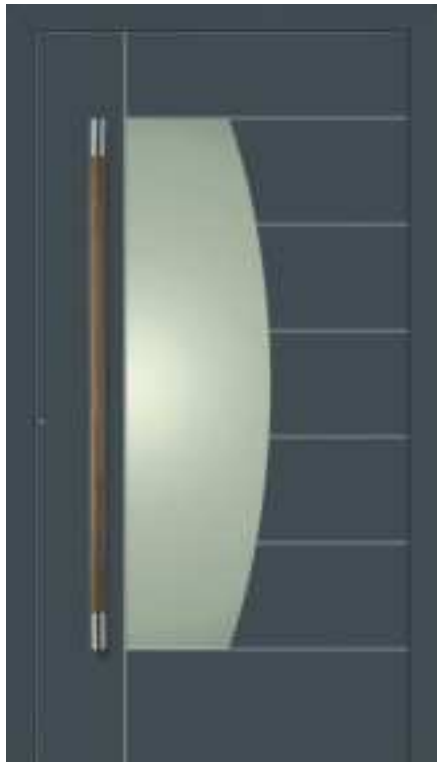

In modern construction there is a variety of challenges facing transparent wall partitions. Thanks to modern solutions double glazed glass can protect against the loss of heat, prevent overheating, protect against noise and constitute a temporary form of protection against burglary.
